

Your inquiry concerning "China RoHS" for Endress+Hauser

Dear valued customer

Thank you for your inquiry regarding Endress+Hauser compliance with the "China RoHS". "China RoHS" is applicable to electronic and electric products and components. Like the European RoHS it deals with the substances mercury, cadmium, hexavalent chromium and two bromine-containing flame retardants: PBB (polybrominated biphenyls) and PBDE (polybrominated diphenyl ethers). However instead of banning these substances, the "China RoHS" requires the indication of the environmental friendly use period and the provision of a substance declaration.

Endress+Hauser is committed to compliance with all relevant laws and regulations, including the "China RoHS".

We have started the implementation of the requirements in our products and many products are already compliant today. More will follow in due course.

For those products where the "China RoHS" requirements are already implemented the substance declarations are available via downloads in www.endress.com.

We trust that this letter will answer your questions. Should you require any further information, please contact your local Endress+Hauser Sales Office (see www.endress.com for contact information).

With kind regards

Endress+Hauser Services AG
